Hiring Team
Meta, Product Analytics
Austin, TX

Dear Hiring Manager,

I am writing to apply for the Data Scientist, Product Analytics role at Meta. With hands-on experience translating large operational datasets into product metrics, running A/B-style process experiments, and delivering quantitative findings to cross-functional stakeholders, I am excited to bring that same hypothesis-driven analytical rigor to Meta's product and business questions.

At Tesla, data science and product decisions are inseparable -- I live that reality daily. I designed end-to-end analytics pipelines using MySQL, Python, R, and JMP to surface predictive insights into tool and process performance, directly informing operational and financial decisions at the factory level. I applied DOE, SPC, and capability analysis to large-scale datasets, formulated quantifiable hypotheses, defined custom metrics to track goal attainment, and communicated findings to engineering and business stakeholders. I also built a real-time Grafana monitoring pipeline to track production metrics, giving the team visibility into performance trends before they became business problems -- the same proactive metric ownership Meta's product analytics teams pursue.

Earlier in my career I built a predictive failure-detection model (25% accuracy improvement) and a Computer Vision defect detection system, both validated with structured statistical methods (Gauge R&R, F1-score). Outside of work, I build AI software: DataIQ (github.com/Sachin1bala1) is an open-source desktop IDE where an AI agent autonomously queries databases, builds pipelines, and surfaces insights -- a direct expression of my drive to make data analysis faster and more actionable.

Meta's scale -- billions of users, petabytes of behavioral data, product decisions that affect global communities -- is exactly the environment where rigorous experimentation and clear metric frameworks matter most. I am based in Austin, TX and ready to contribute to Meta's product analytics mission.

Thank you for your time and consideration. I look forward to the opportunity.

Sincerely,

Sachin Bala
